

Covid 19 - Guidance for Staff and Pupils – March 2022

If you have COVID-19, stay at home and avoid contact with other people

If you have COVID-19 you can infect other people from 2 days before your symptoms start, and for up to 10 days after. You can pass on the infection to others, even if you have mild symptoms or no symptoms at all. If you have COVID-19 you should stay at home and avoid contact with other people.

You should:

- not attend work/school. If you are unable to work from home, you should talk to your employer about options available to you. You may be eligible for [Statutory Sick Pay](#)
- ask friends, family, neighbours or [volunteers](#) to get food and other essentials for you
- not invite social visitors into your home, including friends and family
- postpone all non-essential services and repairs that require a home visit
- cancel routine medical and dental appointments. If you are concerned about your health or you have been asked to attend an appointment in person during this time, discuss this with your medical contact and let them know about your symptoms or your test result
- if you can, let people who you have been in close contact with know about your positive test result so that they can follow this guidance

Many people will no longer be infectious to others after 5 days. You may choose to take an LFD test from 5 days after your symptoms started (or the day your test was taken if you did not have symptoms) followed by another LFD test the next day. If both these test results are negative, and you do not have a high temperature, the risk that you are still infectious is much lower and you can safely return to your normal routine.
